# The Complete CSIT Resources

# Tribhuvan University Central Department of Computer Science & Information Technology

Level : Bachelor Full Marks: 60+20+20 Course : B.Sc. CSIT Pass Marks: 24+8+8

Subject : **Operating System** 

Subject Code: CSC-203 Year: II

Credit Hour : 3 CH

Lecture Hour: 7 LH (3 Theory, 1 Tutorial, 3 Lab) Semester: I

| Unit | Description   | Lecture<br>Hour | Remarks |
|------|---|-----------------|---------|
| 1    | INTRODUCTON   | 6 Hours         |         |
|      | 1.1 History of Operating System:                            |                 |         |
|      | <ul> <li>The First Generation of Computer</li> </ul>        |                 |         |
|      | <ul> <li>The Second Generation of Computer</li> </ul>       |                 |         |
|      | <ul> <li>The Third Generation of Computer</li> </ul>        |                 |         |
|      | <ul> <li>The Fourth Generation of Computer</li> </ul>       |                 |         |
|      | 1.2 Operating System Concept:                               |                 |         |
|      | <ul> <li>Real-Time &amp; Time Sharing</li> </ul>            |                 |         |
|      | <ul> <li>Mainframe Operating System</li> </ul>              |                 |         |
|      | <ul> <li>Personal Computer (PC) Operating System</li> </ul> |                 |         |
|      | <ul> <li>Introduction To System Calls</li> </ul>            |                 |         |
|      | The Shell   |                 |         |
|      | 1.3 Operating System Structure:                             |                 |         |
|      | <ul> <li>Monolithic Systems</li> </ul>                      |                 |         |
|      | Layered Systems   |                 |         |
|      | <ul> <li>Virtual Machines</li> </ul>                        |                 |         |
|      | Client-Server Model   |                 |         |
| 2    | PROCESS MANAGEMENT  | 14 Hours        |         |
|      | 2.1 Introduction to Processes:                              |                 |         |
|      | The Process Model   |                 |         |
|      | <ul> <li>Implementation of Processes</li> </ul>             |                 |         |
|      | • Threads   |                 |         |
|      | Thread Model  |                 |         |
|      | Thread Usage  |                 |         |
|      | <ul> <li>Implementing Thread In User Space</li> </ul>       |                 |         |
|      | 2.2 Interprocess Communication & Synchronization:           |                 |         |
|      | Race Conditions   |                 |         |
|      | Critical Regions  |                 |         |
|      | <ul> <li>Mutual Exclusion with Busy Waiting</li> </ul>      |                 |         |

| Sleep & Wakeup Semaphores Introduction To Message Passing The Dining Philosophers Problem  2.3 Process Scheduling: Round Robin Scheduling Priority Scheduling Multiple Queues  3 MEMORY MANAGEMENT  3.1 Memory Management without Swapping or Paging: Monoprogramming without Swapping & Paging Multiprogramming and Memory Usage Multiprogramming and Fixed Partition  3.2 Swapping: Memory Management with Bit Maps Memory Management with Bit Maps Memory Management with Buddy System Allocation of Swap Space Analysis of Swapping Systems  3.3 Virtual Memory: Paging Page Tables Example of Paging Hardware Associative Memory  3.4 Page Replacement Algorithms: The First-in, First-out The Second Chance Page Replacement Algorithms The First-in, First-out The Second Chance Page Replacement Algorithms The Least Recently Used Modeling Paging Algorithms (Stack Algo.)  3.5 Segmentation: Implementation of Pure Segmentation Segmentation with Paging: MULTIC Segmentation with Paging: The Intel        |   |  | Т       |

# Text Books:

- 1. Modern Operating System Andrew S. Tanenbaum, 2<sup>nd</sup> Edition
- 2. An Introduction to Operating System Concepts and Practice Pramod Chandra P. Bhatt, 2<sup>nd</sup> Edition
- 3. Operating System Concept Silberschatz, Galvin adn Gagne, 6th Edition

# **Laboratories Works:**

Small type of programming (using C programming) of:

- Process Creation
- Process Termination
- Process Deletion
- Process Communication
- Classical Interprocess Communication Problems
- Filing System
- I/O Handling

## **Assignments:**

• 10 Assignments

## **Tests:**

Internal Tests

# **Teaching Techniques:**

- Lectures
- Demonstration
- Assignment (after completion of a unit)
- Oral/Viva

# **Working Environment:**

Linux/Windows Based

# Case Study:

Any One Operating System

The Complete

#### **CSIT** Resources

# TRIBHUVAN UNIVERSITY Central

# **Department of Computer Science**

# & Information

**Technology** 

Level : Bachelor (B.Sc. CSIT) Code : CSC-203

Subject : Operating System

Year : II Semester: I

# $\frac{\text{SECTION "A"}}{\text{(2Q x 10 = 20 Marks)}}$

## Any Two Questions:

1. What is Files? Discuss the must common system calls relating to files.

OR

What is System Calls? Explain the system call flow with the help of a block diagram.

- 2. Explain the four basic modes of Input/Output operations.
- 3. a) How is the Direct Memory Access (DMA) set up?
  - b) Explain the concept of Buffering.
  - c) How interrupt is enabling and detected?

# $\frac{\text{SECTION "B"}}{\text{(8O x 5 = 40 Marks)}}$

# Any Eight Questions:

- 4. What are the main motivations and issues in primary memory management?
- 5. List some differences between Personal Computer Operating Systems and Mainframe Operating Systems.
- 6. Explain the difference between Busy Waiting and Blocking.
- 7. Explain why two-level and scheduling is commonly used.
- 8. Explain the Hierarchical Directory Systems with diagrammatic examples.
- 9. What is the difference between Program and Process?
- 10. Give briefly at least three different ways of establishing interprocess communication?
- 11. A system has four processes P1 through P4 and two resource types R1 and R2. It has 2 units of R1 and 3 units of R2. Given that:

P1 request 2 units of R2 and 1 unit of R1

P2 holds 2 units of R1 and 1 unit of R2

P3 holds 1 unit of R1

P4 requests 1 unit of R1

Show the resource graph for the state of the system. Is the system in deadlock, and if so, which processes are involved.

- 12. Write short notes on:
  - a) File Structure
  - b) The First-In, First-Out (FIFO) Page Replacement Algorithms.
